2. RFX general information

The RFXtrx/RFX transceivers and RFXrec receivers are communicating over an USB port with the Home Automation application. The RFX is powered by the USB port.

At startup the RFX enters for 2 seconds the boot loader (red LED is on) and after this it starts the receive/transmit firmware. If valid (decode-able) packets are received the yellow LED will blink.

The RFX310, RFXtrx315 and the RFXrec433 are mainly for use in the US. The RFXtrx315 can receive US X10 lighting and security sensors or US Visonic PowerCode sensors at 315MHz.

The RFXrec433 can receive weather sensors of different brands at 433.92MHz.

The RFX transceiver (transmitter+receiver) and can receive and control a large number of sensors and other devices.

The RFXtrx433E is an extended RFXtrx433 transceiver with additional memory and non-volatile memory for Somfy RTS codes and configuration settings.

The RFXtrx433XL is the next generation version with double size memory and a serial connection for the Dutch and French smart meters.

The RFX433 is an RFXtrx433XL with a new transceiver module and USB chip.

2.1. RFX310 supported protocols

Protocol	Protocol	Receive/Transmit
US X10 lighting	X10	R
US X10 security	X10	R

2.2. RFXtrx315 supported protocols

2.2.1. RFXtrx315 configured for 310MHz

Protocol	Protocol	Receive/Transmit
US X10 lighting	X10	RT
US X10 security	X10	RT

2.2.2. RFXtrx315 configured for 315MHz

Protocol	Protocol	Receive/Transmit
Aoke relay	Lighting5	T
PT2262, EV1527 and compatibles	Lighting4	RT
Keeloq (unencrypted part only)	Keeloq	R
Visonic CodeSecure (unencrypted part only)	Visonic	R
Visonic PowerCode	Visonic	RT

2.3. *RFXtrx868X, RFXtrx868XL, RFX868 supported protocols*

Protocol	Protocol	Receive/Transmit
Alecto ACH2010	Alecto ACH2010	R
Alecto WS5500, FineOffset WH2900, Ventus W830	FineOffset	R
Davis Vantage Vue EU *	Davis EU	R
Ecowitt WH31, WN32, WH40, WH57, WS90, WH5360	FineOffset	R
Edisio	Edisio	RT
FS20	FS20	RT
Gaposa rollermotor	Gaposa	RT
Honeywell ActiveLink	Honeywell	RT
Itho CVE RFT	Itho CVE RFT	T
Itho CVE ECO RFT	Itho CVE ECO RFT	RT
Keeloq (unencrypted part only)	Keeloq	RT
Mi-Sol WH2900C	FineOffset	R
Orcon	Orcon	RT
Visonic CodeSecure (unencrypted part only)	Visonic	R
Visonic PowerCode	Visonic	R

* based on information available at: wxforum.net – “Implementing a Si1000 based wireless receiver for Davis ISS data” and madscientistlabs.blogspot.com

Important: it is only possible to enable one protocol for receive in the RFX868, RFXtrx868X and RFXtrx868XL because of the used transmission techniques at 868MHz.

2.4. RFXrec433, RFXtrx433, RFXtrx433E, RFXtrx433XL, RFX433 supported protocols

2.4.2. Alphabetic list

Important notes:

- Ext, Ext2, Pro1 and Pro2 firmware can only be used in the RFXtrx433E!
- ProXL1, ProXL2 firmware can only be used in the RFXtrx433XL!
- RFX433 firmware can only be used in the RFX433!
- RFXrec firmware is equal to RFXtrx433 – Type1 firmware without the transmit functions.
- Protocol enabling is only necessary for receive. Transmit protocols are always enabled.
- R = Receive only
- T = Transmit only
- RT = Receive & Transmit

2.5. *undec on*

If new sensor types are released, they will most probably not be decoded by the RFXtrx firmware. For this reason, we have added the option to enable receive of undecoded messages. This function is only to enable RFXCOM to add this new sensor type in the firmware if possible. If “undec on” is enabled in normal use the application will receive a lot of undecoded messages mostly as a result of RF noise or disturbed RF packets.

It can also be used to receive an unknown remote and use the RAW data to create RAW transmit commands.

Important: For normal use “undec on” should be disabled

2.6. Sensitivity influenced by enabled protocols

All protocols can be enabled in the **Pro firmware** versions; however, it is still preferred to enable only the protocols used for receive.

The sensitivity of the receiver part is highly influenced by the number of protocols enabled in Type1, Type2, Ext or Ext2 firmware. Lesser protocols enabled will make the receiver more sensitive for the enabled protocols.

There are a few protocols that will reduce or even eliminate receiving of other protocols if enabled in Type1, Type2, Ext or Ext2 firmware.

For example:

If the AD (LightwaveRF, Siemens) protocol is enabled it can stop receiving of Meiantech / Atlantic, Oregon 3.0,Visonic and Mertik.

All other protocols are disabled if BlindsT0 is enabled in Type1, Type2, Ext, Ext2 or RFX433 firmware.

	X10	ARC	AC	HomeEasy EU	Meiantech/Atlantic	Oregon 1.0	Oregon 2.1	Oregon 3.0 / OWL	ATI	Visonic/Keeloq	Mertik	AD (LWRF)	Hideki/UPM	La Crosse	FS20	ProGuard	BlindsT0	BlindsT1/T2/T3/T4	AE (Blyss)	Rubicson/Alecto	FineOffset/Viking	Lighting4	RSL/Revolt	Byron SX	Imagintronix/Opus	HomeConfort

Green = enabled by default

2.7. RF range reduction

The RF signals operating distance is reduced when the signal has to pass through walls.

2.8. Home Automation software

For the list of Home Automation software that supports the RFXtrx see the web site www.rfxcom.com

2.9. Dimensions

The dimensions of the enclosure: 83.5 x 42 x 15 mm
Total height from bottom to antenna top is 122mm

2.10. Electrical

The RFXtrx is powered by the 5 Volt of the USB interface.

Operating current;

Receive mode:	28 mA (0.14Watt)
Transmit mode:	45 mA

The RFXtrx Radiated RF power is 10dBm max.

2.11. Environmental conditions

Normal operating:	15°C to 35°C
Absolute min-max temperature:	-10°C to 55°C

3. Install the USB driver

The RFXtrx has the FTDI FT232R USB interface chip installed.

The RFXtrx433XL has the FTDI FT230XQ USB interface chip installed.

The USB drivers are available at <http://www.ftdichip.com/Drivers/VCP.htm>

The RFXusb-RFX433 and RFX433XL-USB, RFX433XL-Wifi, RFX433XL-LAN and RFX868XL-USB, RFX868XL-Wifi and RFX868XL-LAN have the CP2102N USB interface chip installed.

The USB drivers are available at:

<https://www.silabs.com/developers/usb-to-uart-bridge-vcp-drivers?tab=downloads>

4. Run RFXflash on Linux under Mono

Open a Terminal screen in Linux (Ctrl-Alt-T)

Execute once:

Install Mono:

`[sudo] apt-get install mono-runtime`

Install VisualBasic support under Mono:

`[sudo] apt-get install libmono-microsoft-visualbasic8.0-cil`

If the USB device is created as ttyACMx you will need to create a link between /dev/ttyACMx and a serial port /dev/ttySx.

This is not necessary if the device is created as /dev/ttyUSBx !!

`[sudo] ln -sf /dev/ttyACM1 /dev/ttyS3`

Note: sudo must be entered without brackets []. sudo is required if not running as super user.

Launch the RFXflash.exe program.

`[sudo] mono RFXflash.exe`

Note: RFXmngnr does not operate under mono!

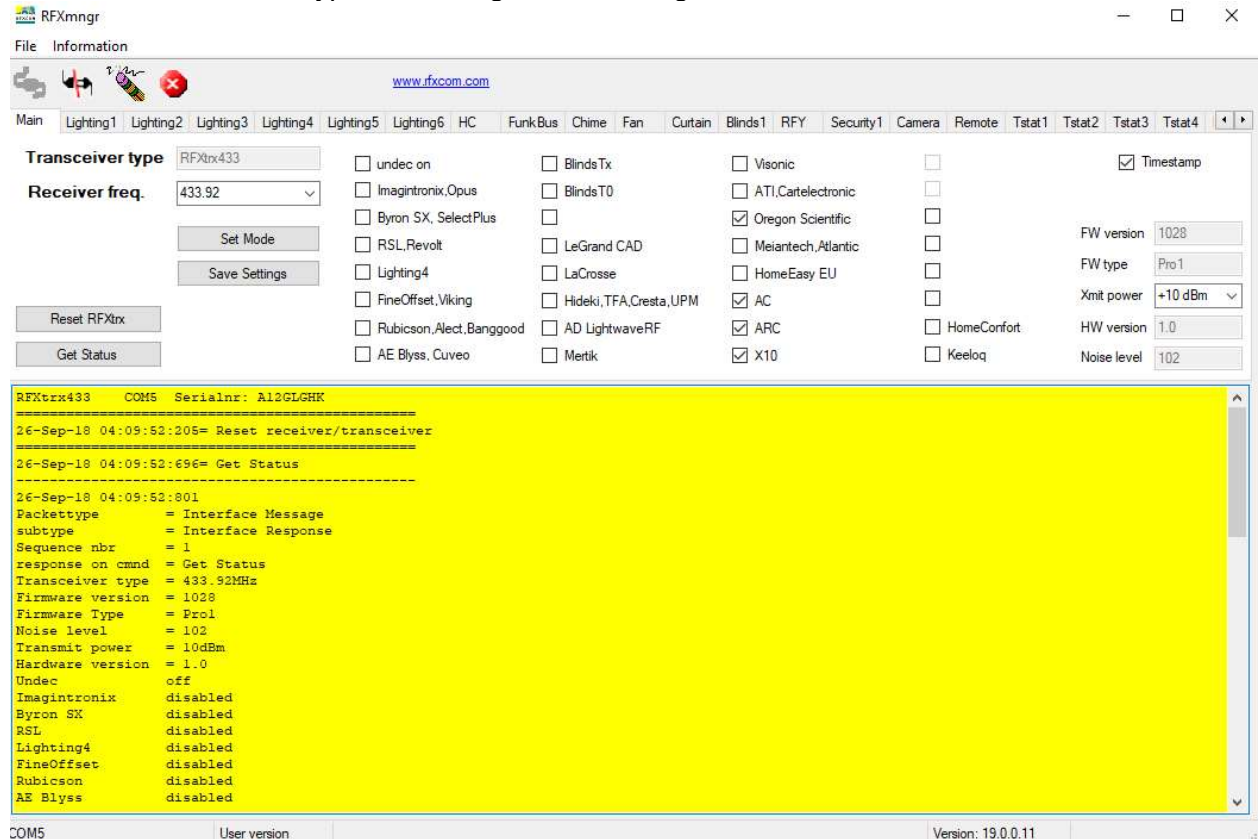

5. RFXmngr test program

The RFXmngr Windows program supports decoding of received data and allows you to transmit commands.

RFXmngr can only be used with Windows!

A good alternative on other OS systems is: https://github.com/ssjoholm/rfxcmd_gc

After the connection the RFXmngr program transmits a Reset and Get Status command so that it will know the RFXtrx type and configuration settings:

Transmitter protocols are always enabled but receiver protocols can be disabled. This is very useful because the receiver will become more sensitive when protocols not used are disabled. Select only the protocols to be used for receiving, click **Set mode** and click **Save Settings**.

Note that these settings are lost in Type1 and Type2 firmware after a firmware update and need to be set again.

5.1. Receiver

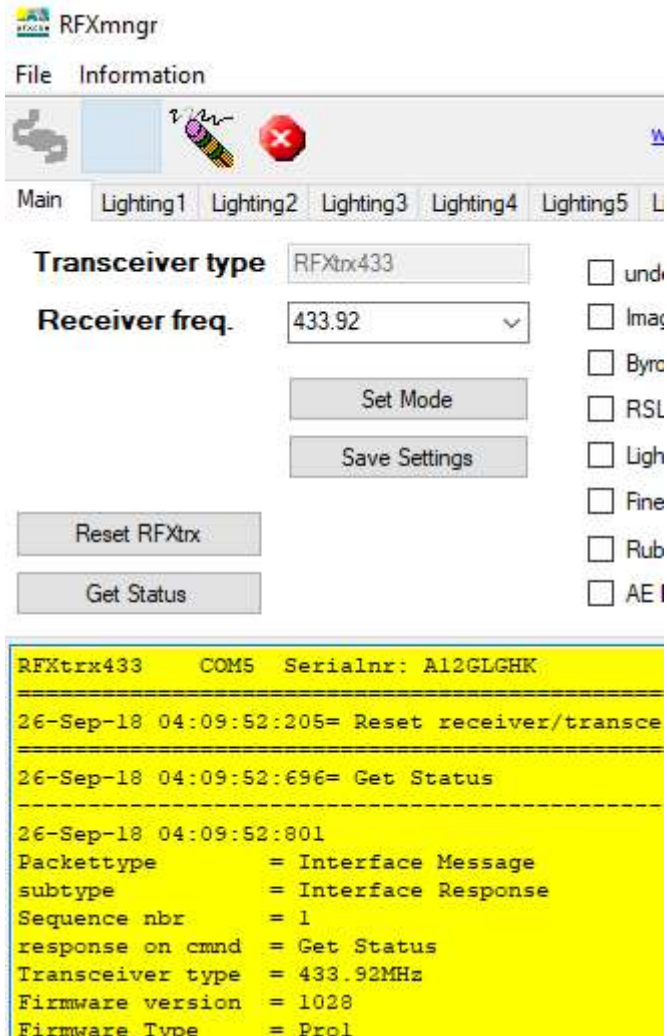

The RF protocols to be received can be configured on the Main tab at **Set Mode**.

Click **Save Settings** to save the selected protocols in non-volatile memory of the RFXtrx. This configuration is now restored every time after a power up.

Note that these settings are lost after a firmware update in Type1 or Type2 firmware and need to be set again.

Note: Protocol enabling is only necessary for receive. Transmit protocols are always enabled.

The received RF data is decoded and displayed in the yellow window.

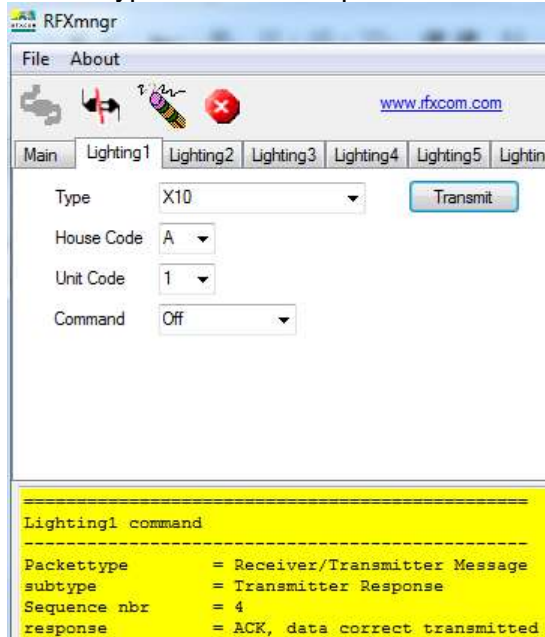

5.2. Transmitter

The tabs after the Main tab are used to send commands to the transmitter.

For example, Lighting1 is used to send X10, ARC and some more.

Note: Protocol enabling is only necessary for receive. Transmit protocols are always enabled.

Select Type to see which protocols are supported on the different tabs.

The transmitted commands are displayed in the yellow window including the acknowledge send by the RFXtrx, in the example above “ACK, data correct transmitted”.

6. Flash update of the RFXtrx

6.1. *Update firmware in the RFXtrx*

Firmware is flashed in the RFXtrx using this procedure:

1. Depending on the RFXtrx type download the latest .hex firmware file.
2. Connect the RFXtrx to a Windows system or Linux under MONO
3. Stop any program that is connected to the RFXtrx.
4. Start the RFXflash program with administrator rights (version 12.0.0.0 or higher)
5. Select the USB RFXtrx COM port or TCP/IP port and click the CONNECT button, (the red LED on the RFXtrx should switch on now)
6. Load the correct .hex firmware file for your RFXtrx,
7. Click the WRITE button,
8. Click the Normal Execution mode button.

IMPORTANT:

1. Do not interrupt the flash procedure when started.
2. It can happen that the flash procedure ends with a pop-up screen indicating errors. Just disconnect the RFXtrx and start again at step 5 until the flash procedure is finished without errors.

If the red LED does not switch on if you click the CONNECT button:

1. Check if you have selected the correct USB COM port.
2. If you have flashed the RFXtrx before and interrupted the flash procedure it is possible that the RFXtrx does not enter the flash state. Contact support@rfxcom.com for help.

Note: Receiver Settings are lost in Type1 and Type2 firmware after a firmware update and must be set again.

6.2. Update firmware in the RFXtrx step by step

- Click the Connect to Device button.

The RFXtrx will automatically switch from normal mode to the bootloader now.

- Click the Open HEX file button and load the RFXtrx`yyy??_zz`.hex file
Be sure to load the latest firmware file for the RFXtrx.
`yyy` indicates the RFXtrx frequency, so load the RFXtrx433 for an RFXtrx433!
`??` this is XL for the RFXtrxXL versions.
`zz` indicates the firmware version.

- Click the Write device button and the RFXtrx is flashed.

- Click on the Normal Execution Mode button to set the RFXtrx to running mode.

Note: Receiver Settings are lost in Type1 and Type2 firmware after a firmware update and must be set again.

7. RFX Wifi

7.1. Restore Wifi settings

To reset the Wifi settings to factory settings, disconnect the power, press and keep the RESTORE button, connect the power. If a pin hole with the text “Restore” is present on the back side of the enclosure, use a small pin to push the restore button else open the enclosure.

7.2. Configure the RFX Wifi.

Connect the RFX Wifi to an USB or the external 5V 1A power supply.

Open the Wifi network settings on your PC or mobile and connect the access point RFXCOM WiFi Manager and use **password: 12345678**

Open a browser and open **192.168.4.1** and enter your Wifi credentials, SSID and password of your Wifi network.

Optional enter a Local IP with Subnet Mask and Gateway, for example:

192.168.1.150

255.255.255.255.0

192.168.1.1

DHCP is used if no Local IP, Subnet Mask, Gateway info is entered

Enter your WiFi credentials

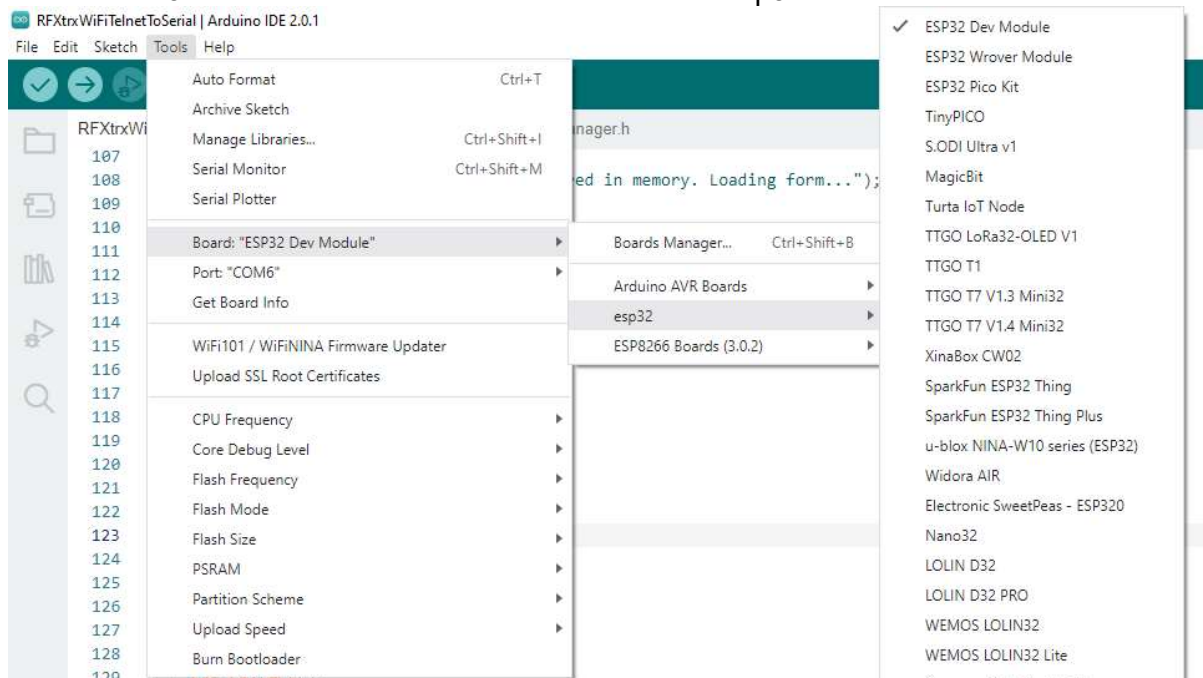

for DHCP do not enter any value at Local IP, Subnet Mask and Gateway

SSID:	<input type="text"/>
Key:	<input type="text"/>
Local IP:	<input type="text"/>
Subnet Mask:	<input type="text"/>
Gateway:	<input type="text"/>
<input type="button" value="Save"/>	

Click Save and the RFX Wifi will restart and connect your Wifi.

7.3. Flash the Wifi firmware in the RFX Wifi

- Download the Arduino IDE to flash the ESP32 in the RFX Wifi with new firmware.
<https://www.arduino.cc/en/software>
- In Arduino IDE:
Open File – Preferences and add at Additional boards manager URLs:
https://dl.espressif.com/dl/package_esp32_index.json
- Open Tools – Board: “xxxxxx” -Boards Manager
At BOARDS MANAGER enter ESP32 and INSTALL the latest version “esp32 by Espressif Systems”.
- Select “ESP32 Dev Module” at Tools – Board: “xxxx” – esp32

- Select the COM port of the RFX Wifi at Tools – Port
- To know the Sketchbook location open File – Preferences – Settings.
Copy the RFXtrxWiFiTelnetToSerial directory to your Arduino sketch directory
RFXtrxWiFiTelnetToSerial directory contains:
 - HTML.h
 - revisions.txt
 - RFXtrxWiFiTelnetToSerial.ino
 - WifiFunc.h
- Open RFXtrxWiFiTelnetToSerial.ino and click the Upload button. The firmware will be compiled and flashed in the RFX Wifi
ESP32

7.4. Use the USB port of the RFX Wifi for the RFX433/RFX868

The USB port is normally only used to power the RFX Wifi or to flash the ESP32 module. With the default delivered Wifi firmware in the ESP32 you have to use Wifi for RFXmngr and RFXflash.

To use the USB port to communicate with the RFX433/868 you must flash the ESP32 with special USB firmware.

Copy the RFXtrxUSB directory to your Arduino sketch directory. The RFXtrxUSB directory contains only RFXtrxUSB.ino

Open RFXtrxUSB.ino and click the Upload button. The USB firmware will be compiled and flashed in the RFX Wifi.

You can now use the USB port to communicate with RFXmngr or RFXflash to the RFX433/868

7.5. Add Wifi option to the RFXusb-RFX433

Needs a very small solder iron and SMD solder experience with 0603 components!!

Warranty is lost with this installed!

Use 5V 1A adapter with Mini-B connector, OTB-R08-5010

Remove resistors R12, R13

Solder these SMD components on the RFXusb-RFX433 PCB:

ESP32 16Mb

100n 0603 C9, C15, C22

22uF 0603 C21

10K 0603 R11, R14, R21, R22

SS8050-G T1, T2

2 tactile switches

PTS815SJM250SMTR

Note: it is possible that some parts are already present.

Flash the Wifi firmware in the ESP32.

7.6. Add the Wifi module to the RFX433XL-USB

Depending on the PCB revision:

Cut the wires at R6 and R8

Remove the resistors R6 and R8

Press the push-to-fit connectors of the Wifi module into JP2-JP3-JP4

This needs some force! Use combination pliers and pinch right next to each connector if necessary. Press each connector into the PCB a little at a time.

O	0	0	1	0	15	1	1	1	0
P	0	0	1	1	16	1	1	1	1

H H H H = House code

X X X X = device code

Switch position in the motor:

Up = 1

Middle = not used!!!!

Down = 0

Examples:

If you assign the address E7 (1000 0110) to the curtain motor then set the switches to: 1=up, 2=down, 3=down, 4=down, 5=down, 6=up, 7=up, 8=down

If you assign the address A2 (0110 0001) to the curtain motor then set the switches to: 1=down, 2=up, 3=up, 4=down, 5=down, 6=down, 7=down, 8=up

8.3. *Flamingo, AB400, IMPULS, Sartano, Brennenstuhl, SilverCrest 91089, Cranenbroek switch settings*

Use type ELRO AB400D

Note that the HC (House Code A-P) is the house code used in programs and has no direct relation with the A,B,C,D,E buttons on the remotes!

32	1	1	1	1	1	0	64	1	1	1	1	1	1	

Examples:

A1 0000000000
A15 0000111000
N2 1101000100
N11 1101101000

0 = switch off

1 = switch on

8.4. Energenie 5-gang 429.950

To know the codes to use open the remote and check the 1 to 5 jumpers connected.
If a jumper connection is open it is a 1. If connected it is a 0 (zero)

	1	2	3	4	jumper setting in the remote
HC=====					
A	0	0	0	0	
B	0	0	0	1	
C	0	0	1	0	
D	0	0	1	1	
E	0	1	0	0	
F	0	1	0	1	
G	0	1	1	0	
H	0	1	1	1	
I	1	0	0	0	
J	1	0	0	1

A15     0 0 0 0 1 1 1 0 0 0
N2      1 1 0 1 0 0 0 1 0 0
N11     1 1 0 1 1 0 1 0 0 0
```

0 = switch off

1 = switch on

8.8. MDREMOTE V106, V107

This MDREMOTE has been tested.

<http://www.ultraleds.co.uk/mini-dimmer-with-rf-remote-control-12-or-24v-dc-12a-maximum.html>

The RFXtrx433 can only transmit MDREMOTE commands.

Procedure to find the ID of the MDREMOTE: In RFXmngnr enable the X10 protocol and enable "Undec on". Press a button on the MDREMOTE remote.

The undecoded message contains the ID in the 2nd and 3rd byte, for example:

UNDECODED NEC:20AF6801D1

The 2 bytes after 20 is the MDREMOTE ID, in this example AF 68

8.9. MDREMOTE V108, EKAB-10KRF

This MDREMOTE has been tested.

- <http://www.ledstripkoning.nl/accessoires/dimmers-wit/draadloze-dimmer-10-knops-rf/>

Procedure to find the ID of the MDREMOTE: In RFXmngnr enable the Lighting4 protocol and enable "Undec on". Press a button on the MDREMOTE remote.

The undecoded message contains the ID in the 2nd and 3rd byte, for example:

UNDECODED ARC:201A0703FCFC

The 2 bytes after 20 is the MDREMOTE ID, in this example 1A 07

8.10. Aoke relay

The Aoke 12V DC - 315MHz or 433.92MHz 1 channel relay is available at www.aliexpress.com store No.110758. Indicate clearly the required frequency when ordering!

The 1 channel learning relays can be used, see the picture below.

For example, for 1 relay:

http://www.aliexpress.com/store/product/DC12V-1CH-wireless-switch-remote-control-system-remote-control-switch-for-guard-door-window-curtain/110758_936534863.html

or for 6 relays:

http://www.aliexpress.com/store/product/ak-DC12V-1CH-RF-rocker-switch-livolo-switch-system-in-china-j-12a-108d-smart-house/110758_1007306574.html

The jumper next to the learning button defines to operating mode:
Open = momentary
1-2 = toggle mode
2-3 = on/off mode (to be used with the RFXtrx)

8.11. SEAV TXS4

The ID can be found using RFXmngr and enable only ByronSX and undec on.

Or calculate the ID:

A SW1 switch on = 1

```
|-----SW1-----|
 1 2 3   4 5 6 7   8 9 10
0 x x x | x x x x | x x x 0 | 0 1 0 1
```

For example SW1 = **on off on off on off on off on off**

The ID will become:

```
|-----SW1-----|
 1 2 3   4 5 6 7   8 9 10
0 1 0 1 | 0 1 0 1 | 0 1 0 0 0 | 0 1 0 1 this is hex: 5 5 4 5
```

8.12. How to find the dx.com RGB LED strip driver ID

Valid for the TRC02 remote with 2 batteries.

Flash the RFXtrx433 with Type2 firmware to be able to receive the remote ID in RFXmngr.
In RFXmngr enable only the LightwaveRF (AD) protocol.

```
-----
Packettype    = Lighting5
subtype       = RGB TRC02
Sequence nbr  = 5
ID            = FCC48B
Command       = On
Signal level  = 8
The ID is: FC C4 8B
```

If necessary flash the RFXtrx433 back to Type1 or ext if Type2 does not support devices you need. (See chapter 2.2)

8.13. How to find the dx.com RGB LED strip driver ID (rev. 2)

Valid for the TRC02 remote with 3 batteries and ebay.com 191481664563.

In RFXmngr enable only the Lighting4 protocol.

```
-----
Packettype    = Lighting4
subtype       = PT2262
Sequence nbr  = 29
Code          = 161C84
The ID is: 16 1C
```

8.14. How to find the Eurodomest ID

You can assign a random ID to the Eurodomest. If you want to use the same ID as the remote you can find the ID of the remote using RFXmngr.

Start RFXmngr and enable only the Lighting4 protocol.

Press a button on the remote and you will receive a message like:

```
-----
Packettype    = Lighting4
subtype       = PT2262
Sequence nbr  = 12
Code          = 6DFE0F
The ID is: 6 DF E0
```

Note: Eurodomest can also be controlled using ARC.

8.15. How to find the Screenline ID

You can assign a random ID to the Screenline. If you want to use the same ID as the remote you can find the ID of the remote using RFXmngr.

Start RFXmngr and enable only the Lighting4 protocol and undec on.

Press a button on the remote and you will receive a message like:

```
-----  
Packettype = UNDECODED RF Message  
UNDECODED ARC:40000F7BD1D2AF04B7
```

The ID starts at the 7th character, in this example the ID = 7B D1

8.16. How to find the Avantek remote ID

You can find the ID of the remote using RFXmngr.

Start RFXmngr and enable only the Lighting4 protocol.

Press a button on the remote and you will receive a message like:

```
Packettype      = Lighting4  
subtype         = PT2262  
Sequence nbr    = 3  
Code            = 122336 decimal:1188662  
S1- S24         = 0001 0010 0010 0011 0011 0110  
Pulse           = 280 usec  
Signal level    = 7   -64dBm
```

The ID to be used is 1 22 33

8.17. How to find the Siemens SF01 ID

Start RFXmngr and enable only undec on.

Press a button on the remote and you will receive a message like:

```
-----  
11-04-2023 11:08:56:552=  
507F000001014802F8013002EC012E02EF012A02ED012D02F1012902EF012A01A9027002ED012D01A8027401A1027801A30  
27602ED012C02F2012802EF012B01A1027702EA013002F3012B01A702710000  
Packettype      = RAW Packet  
Packet Length   = 80  
subtype         = RAW packet  
Sequence nbr    = 0  
Repeat          = 1  
Nbr of pulses   = 19  
328 760 304 748 302 751 298 749 301 753 297 751 298 425 624 749 301 424 628 417  
632 419 630 749 300 754 296 751 299 417 631 746 304 755 299 423 625 0
```

A short-long pulse time is a "1" and long-short is a "0", thus:

```
328 760 304 748 302 751 298 749 301 753 297 751 298 425 624 749  
1      1      1      1      1      1      1      1      1      1      1      1      1      0  
  
301 424 628 417 632 419 630 749 300 754 296 751 299 417 631 746  
1      0      0      0      0      1      1      1      1      1      1      1      0  
  
304 755 299 423 625 0  
1      1      0
```

The ID is in the first 16 bits. 1111 1110 1000 1110

Convert binary to hex and you find the ID: FE 8E

9. Blyss commands

Some Blyss devices, like the Blyss motors, require a special command sequence number. To simplify it; 0,1,2,3,4,0,1,...

This sequence number is normally created by the Blyss remote but now also by the RFXtrx433.

If you use a Blyss remote and the application (Domoticz, DomotiGa, Homeseer...) does not sync with the received Blyss command you will see that you need to send multiple commands with the RFXtrx433 before the Blyss device will respond.

For example,

The Blyss remote transmits with the sequence numbers 0,1,2

If the RFXtrx433 transmits now with sequence number 0 it will not be seen by the Blyss device as a valid command and at the time the RFXtrx433 transmits the commands 1,2,3 the command will be detected as valid when it receives the command with sequence number 3.

The same is true for the remote. If you transmit commands with the RFXtrx433 and after that with a Blyss remote you need to transmit several commands with the remote before the Blyss device responds.

I guess the same behaviour will show if you use multiple Blyss remotes.

10. Somfy RTS

Somfy RTS* devices can only be controlled by the RFXtrx433E, RFXtrx433XL, RFX433. (Not by the RFXtrx433)

The RFXtrx433E, RFXtrx433XL, RFX433 version is an RFXtrx433 with additional hardware to enable the RFY protocol used to control Somfy RTS.

The 433.42MHz transmitter in the RFXtrx433E/RFXtrx433XL/RFX433 is used for a reliable control of the Somfy RTS devices over a large distance and through walls.

The RFXtrx433E, RFXtrx433XL, RFX433 433.92MHz transmitter is also used to control all other devices.

To pair the Somfy RTS device:

- Select a unique ID and unitcode for the RFXCOM RFY device.
- Disconnect power from all Somfy RTS devices except the device to pair. (not necessary if you select the correct device on the Somfy remote)
- Press the Program button > 2 seconds on the original Somfy remote until the Somfy device responds.
- Transmit a Program command with the RFXtrx433E, RFXtrx433XL, RFX433 The Somfy RTS device should respond indicating the pair command was successful.

The RFXCOM RFY remote is registered in the RFXtrx433E, RFXtrx433XL, RFX433 by sending a Program command.

Up to 40 RFXCOM RFY remotes can be registered in the RFXtrx433E, RFXtrx433XL, RFX433. Remotes can be erased from the RFXtrx433E, RFXtrx433XL, RFX433 using the RFXmngr program.

The Somfy RTS device can be controlled by any application if the same ID and Unit Code are used.

For example, if the RTS device is paired using RFXmngr with ID=1 02 03 and Unit Code 1, the RTS device can be controlled with Homeseer using the same ID and unit code.

Usage:

To control Somfy Centralis modules use the RFY2 = > 2 seconds commands.

Somfy Tilt motors can be configured in 2 modes, US or European.

To toggle between modes, press the Reset/ Prog button 2 s. Repeat until the LED, according to the desired configuration, lights up. Store by pressing 2 s.

To control Venetian Blinds in US mode:

- up/down (transmit < 0.5 seconds): open or close
- up/down (transmit > 2seconds): change angle

To control Venetian Blinds in Europe mode:

- up/down (transmit < 0.5 seconds): change angle
- up/down (transmit > 2seconds): open or close

Somfy RTS motors have a limited number of memory locations for the remotes. Some have a max of 10 remotes. If you try to pair the 11th remote (can be a RFXtrx433E, RFXtrx433XL, RFX433 ID-unit) the motor reacts as if the pairing was successful but there is no response on an up/down command.

To solve this, reset the motor to remove all remotes.

* Somfy RTS are registered trademarks of Somfy System, Inc.

10.1. How to move RFX devices to another RFXtrx433E, RFXtrx433XL or RFX433

Important:

1. If an RFX device is moved to another RFXtrx do not use the old RFXtrx to control the RFX devices, because the rolling code will become out of sync with the Somfy device.
2. Use the latest RFXmngr and for the RFXtrx433E the latest Pro1 or Pro2 firmware and for the RFXtrx433XL the latest ProXL1 firmware and for the RFX433 the latest RFX433 FW

Step 1: List all RFX devices in the “old” RFXtrx.

The screenshot shows the RFXmngr software interface. The 'Type' is set to 'RFY'. The 'ID' is 0, 'Unit Code' is 1, and the 'Command' is 'List remotes'. The 'rfu1', 'rfu2', and 'rfu3' fields are all set to '00'. A 'Transmit' button is visible. Below the input fields, there is a text area showing the command details and the resulting interface message.

Use * commands with care as they can delete or set parameters in the m

Venetian Blind in US mode:
- up/down (transmit < 0.5 seconds): open or close
- up/down (transmit > 2seconds): change angle

Venetian Blind in Europe mode:
- up/down (transmit < 0.5 seconds): change angle
- up/down (transmit > 2seconds): open or close

```
02-Dec-18 03:13:53:971= RFY command
-----
Packettype   = RFY
subtype      = RFY
Sequence nbr = 18
idl-3        = 000000 decimal:0
Unit         = 1
Command      = List remotes
rfu1         = 00
rfu2         = 00
rfu3         = 00
Signal level = +10 dBm
-----
02-Dec-18 03:13:54:284
Packettype   = Interface Message
subtype      = RFY remote:0 ID:00 00 01 unitnbr:1 rfu1:A4 rfu2:0 rfu3:14
```

Step 2: Connect the “new” RFXtrx433E, RFXtrx433XL or RFX433.

Select the ID, Unit Code, rfu1, rfu2 and rfu3 values.

Transmit a Program command. The values are now programmed in the “new” RFXtrx and the Somfy device can be controlled with this RFXtrx.

Transmit an Up and Down command to be sure the motor is no longer in program mode!

The screenshot shows the RFXmngr software interface. The 'Type' is set to 'RFY'. The 'ID' is 0, 'Unit Code' is 1, and the 'Command' is 'Program'. The 'rfu1' field is set to 'A4', 'rfu2' is set to '00', and 'rfu3' is set to '14'. A 'Transmit' button is visible. Below the input fields, there is a text area showing the command details and the resulting interface message.

Use * commands with care as they can delete or set parameters in the m

Venetian Blind in US mode:
- up/down (transmit < 0.5 seconds): open or close
- up/down (transmit > 2seconds): change angle

Venetian Blind in Europe mode:
- up/down (transmit < 0.5 seconds): change angle
- up/down (transmit > 2seconds): open or close

11. Dooya and compatibles

11.1. BlindsT6

To add a RFXtrx433/E/XL, RFX433 BlindsT6 device to the blinds motor:

1. press the "program" button twice on the original remote ==> 2 beeps
2. transmit the "confirm" command with the RFXtrx ==> 5 beeps

11.1.1. Dooya DT52E, DT82TV, DT82TN

- Select a random ID different from all zeroes and a unit code 1 to 15
- Press the program button on the motor until the LED lights up
- Transmit a Confirm command.
- The LED on the motor starts blinking.
- Transmit again a Confirm command.
- The LED on the motor blinks 5 times
- The motor can be controlled now by the RFXtrx433/E/XL, RFX433

11.2. Bi-directional DDxxxx

To add a RFX433 DDxxxx bi-directional device to the blinds motor:

1. Set the upper and lower limits in the motor using the original remote.
2. press the "P2" button twice on the original remote.
3. transmit the "P2 (pair)" command with the RFX433

The hex command structure that can be used in Home Assistant:

```
0C 31 00 00 11 22 33 44 00 00 00 00 00
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  | = always 00
|  |  |  |  |  |  |  |  |  |  |  |  | ==== angle can be hex 00 to B4
|  |  |  |  |  |  |  |  |  |  |  |  | ===== percent can be hex 00 to 64
|  |  |  |  |  |  |  |  |  |  |  |  | ===== command
|  |  |  |  |  |  |  |  |  |  |  |  | ===== unit code 00 to 10
|  |  |  |  |  |  |  |  |  |  |  |  | ===== ID4 00 to FF (ID 00000001 to FFFFFFFF)
|  |  |  |  |  |  |  |  |  |  |  |  | ===== ID3 00 to FF
|  |  |  |  |  |  |  |  |  |  |  |  | ===== ID2 00 to FF
|  |  |  |  |  |  |  |  |  |  |  |  | ===== ID1 00 to FF
|  |  |  |  |  |  |  |  |  |  |  |  | ===== always 00
|  |  |  |  |  |  |  |  |  |  |  |  | ===== always 00
|  |  |  |  |  |  |  |  |  |  |  |  | ===== always 31
===== always 0C
```

Command:

Up	0x00
Down	0x01
Stop	0x02
P2 (pair)	0x03
Percent	0x04
Angle	0x05
Percent+Angle	0x06

Unit code:

00 unit 1
01 02 03 04 05 06 07 08 09 0A 0B 0C 0D 0E
0F unit 16
10 Group command, all units with the same ID.

Example, ID 11 22 33 44, unit 1, P2 (pair) command.
The hex command line without spaces to be used is:
0C310000112233440003000000

12. ID switches Casafan and Lucci Air fans

Select the ID for switch settings:

ID	Remote switches			
	1	2	3	4
0	0	0	0	0
1	0	0	0	1
2	0	0	1	0
3	0	0	1	1
4	0	1	0	0
5	0	1	0	1
6	0	1	1	0
7	0	1	1	1
8	1	0	0	0
9	1	0	0	1
A	1	0	1	0
B	1	0	1	1
C	1	1	0	0
D	1	1	0	1
E	1	1	1	0
F	1	1	1	1

For LucciAir AC fan: 0 = ON

For Casafan and LucciAir DC fan: 1 = ON

13. Transmit Funkbus (Insta, Gira, Jung, Berker)

With Pro2 or ProXL1 firmware you can transmit Funkbus commands using ID : 3F CC.

If the Home Automation application has Funkbus control not implemented, you can use an ANSLUT device instead.

The 1st digit of the ID indicates the Group.

0 = A,

1 = B,

2 = C,

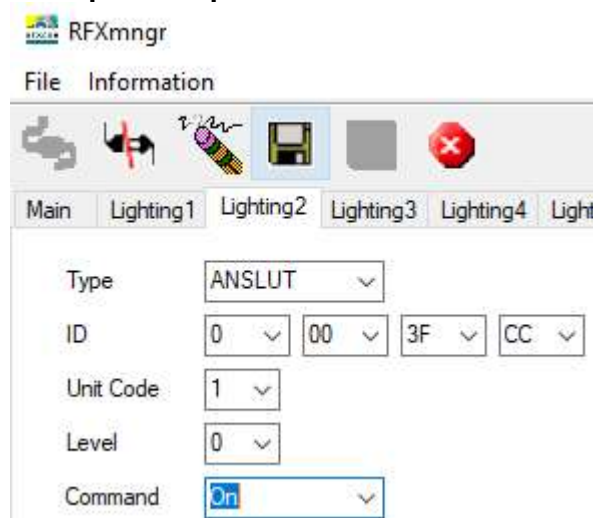

3 = Scenes

The last 2 bytes are the remote ID: 3F CC.

For de groups A, B en C: Unit code 1-8 = channel 1-8

For group Scenes (3) : Unit code 1-5 = scene 1-5.

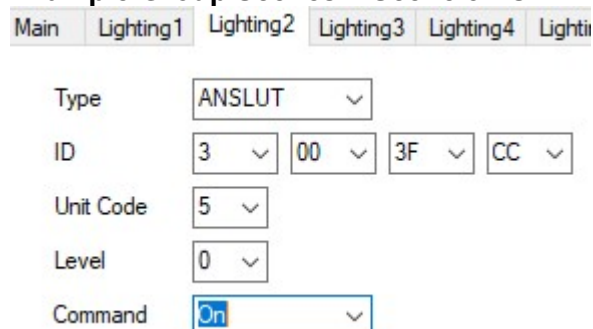

Example Group A - Channel 1 - On

The screenshot shows the RFXmngtr application window. The 'File' menu is open, and the 'Information' tab is selected. The 'Main' tab is active in the bottom panel. The configuration fields are as follows:

Field	Value
Type	ANSLUT
ID	0 00 3F CC
Unit Code	1
Level	0
Command	On

Example Group Scenes – Scene 5 - On

The screenshot shows the RFXmngtr application window. The 'Main' tab is active in the bottom panel. The configuration fields are as follows:

Field	Value
Type	ANSLUT
ID	3 00 3F CC
Unit Code	5
Level	0
Command	On

14. Transmit undecoded ARC commands.

Plug-in modules or other equipment with a PT2262 can be controlled using Lighting4.

There are a lot of brands using the PT2262 and some of them use the same timing (350) as used by the ARC devices but a different protocol definition.

Messages will be received as undecoded ARC messages if the protocol definition does not match the definition of the ARC protocol. Remote commands are received as ARC commands with a wrong house and device code and/or command code or as undecoded ARC messages if “undec on” is enabled. Decoding of these remotes is therefore not possible because they overlap the ARC protocol partly.

But transmitting these commands is possible using the Lighting4 command.

So if we receive this command UNDECODED ARC:18014403:

(18 is not used)

hex to binary table

0=0 0 0 0
1=0 0 0 1
2=0 0 1 0
3=0 0 1 1
4=0 1 0 0
5=0 1 0 1
6=0 1 1 0
7=0 1 1 1
8=1 0 0 0
9=1 0 0 1
A=1 0 1 0
B=1 0 1 1
C=1 1 0 0
D=1 1 0 1
E=1 1 1 0
F=1 1 1 1

0 1 4 4 0 3 = selection box 0000 0001 0100 0100 0000 0011

Not selected = 0, box selected = 1

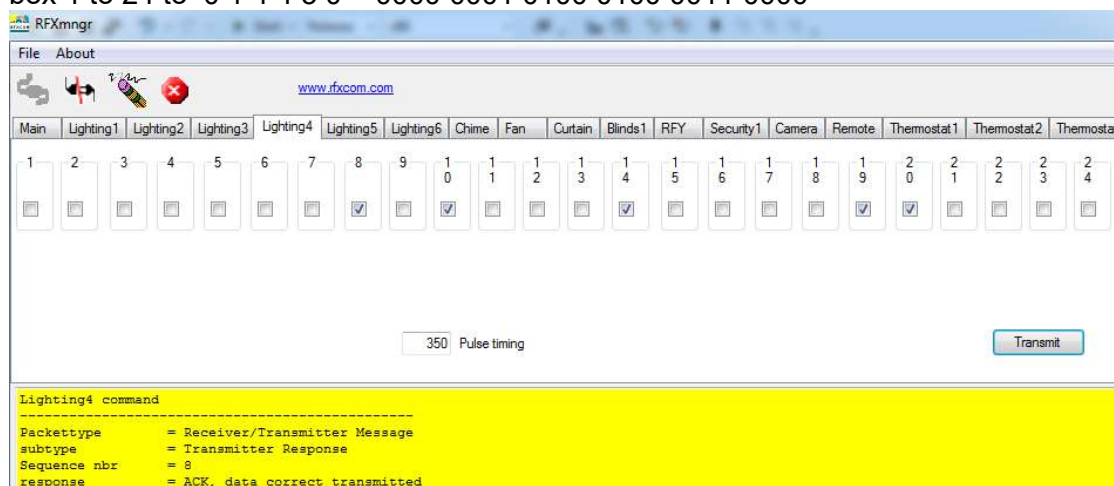

And the Lighting4 command contains the same “undec code” 01 44 03:

Lighting4 command:09 13 00 04 **01 44 03** 01 5E 00

pulse timing is 350 = hex 015E

Another example:

For this command UNDECODED ARC:18014430 set on the Lighting4 tab in RFXmngtr selection box 1 to 24 to 0 1 4 4 3 0 = 0000 0001 0100 0100 0011 0000

15. MCZ pellet stove.

RFXtrx433/RFXtrx433E:

In the Type2 firmware zip file which is available on the downloads page you will find a special firmware RFXtrxMCZ.hex that enables you to know the ID of the your MCZ remote.

Flash the RFXtrxMCZ.hex firmware in your RFXtrx433/E/XL and start RFXmngr.

RFXtrx433XL, RFX433:

In RFXmngr select Receiver Freq 434.50 and enable MCZ

Transmit a command with the MCZ remote and you will receive the information.

The ID in this example is 81 3F 22

```
Packettype    = Thermostat4
subtype       = MCZ pellet stove 2 fans model
Sequence nbr  = 0
ID            = 0x813F22 decimal:8470306
Beep          = Yes
Fan1 speed    = 1
Fan2 speed    = 7
Flame power   = 1
Command       = Off
Signal level  = 6  -72dBm
```

Flash now Type2 or Ext firmware in your RFXtrx433/RFXtrx433E and you can control your MCZ stove using the received ID.

Important: remove the batteries from the original remote before you start using the RFXtrx433/E/XL, RFX433 to control the MCZ stove!

16. Lighting4 devices

16.1. Proluxx projection screen

Use Lighting4 with a pulse timing of 360

UP	1110 1101 0101 1001 0101 0010	ED 59 52
STOP	1110 1101 0101 1001 0101 1000	ED 59 58
DOWN	1110 1101 0101 1001 0101 0100	ED 59 54
RESET	1110 1101 0101 1001 0101 0001	ED 59 51

16.2. Kingpin (KP100) projection screen

Use Lighting4 with a pulse timing of 1040

UP	1110 0001 0100 0010 0010 0010	E1 42 22
STOP	1110 0001 0100 0010 0010 0100	E1 42 24
DOWN	1110 0001 0100 0010 0010 1000	E1 42 28
PROGRAM	1110 0001 0100 0010 0010 0001	E1 42 21

16.3. Mercury remote control mains sockets

<http://mercury.avsl.com/product?range=ME5124>

Use Lighting4 with a pulse timing of 188

1 OFF	01000100010101010011	1100
1 ON	01000100010101010011	0011
2 OFF	01000100010101011100	1100
2 ON	01000100010101011100	0011
3 OFF	01000100010101110000	1100
3 ON	01000100010101110000	0011
4 OFF	01000100010111010000	1100
4 ON	01000100010111010000	0011
5 OFF	01000100011101010000	1100
5 ON	01000100011101010000	0011

16.4. Conrad 034911 sockets

<http://www.conrad.nl/ce/nl/product/034911/Draadloze-schakelaarset-5-delig>

Use Lighting4 with a pulse timing of 425

Off = last 2 digits: 00

ON = last 2 digits: 01

Group	Unit		
I	1 OFF	00 01 01 01	00 01 01 01 01 01 01 00
II	1 OFF	01 00 01 01	00 01 01 01 01 01 01 00
III	1 OFF	01 01 00 01	00 01 01 01 01 01 01 00
IV	1 OFF	01 01 01 00	00 01 01 01 01 01 01 00
I	1 OFF	00 01 01 01	00 01 01 01 01 01 01 00
I	2 OFF	00 01 01 01	01 00 01 01 01 01 01 00
I	3 OFF	00 01 01 01	01 01 00 01 01 01 01 00
I	4 OFF	00 01 01 01	01 01 01 00 01 01 01 00
I	1 OFF	00 01 01 01	00 01 01 01 01 01 01 00
I	1 ON	00 01 01 01	00 01 01 01 01 01 01 01

16.5. Sonoff

All Sonoff 433MHz RF receiver devices can be controlled by the RFXtrx433/E/XL using Lighting4 with a pulse timing of 370usec.

The 4 button Sonoff Lighting4 remote code:

The last digit indicates the button:

A	0001	hex 1
B	0010	hex 2
C	0100	hex 4
D	1000	hex 8

The first 5 digits are the ID. Here an example of ID=D216B button=A

Packettype = Lighting4
subtype = PT2262
Sequence nbr = 1
Code = D216B1 decimal:13768369
S1- S24 = 1101 0010 0001 0110 1011 0001
Pulse = 370 usec
Signal level = 8 -56dBm

The Lighting4 commands can be used for example to control the 4 relays in a Sonoff 4CH Pro https://www.banggood.com/SONOFF-4CH-Pro-10A-2200W-2_4Ghz-433MHz-RF-InchingSelf-LockingInterlock-Smart-Home-p-1153324.html

16.6. PT2262 and EV1527 oscillator resistors accepted

For the PT2262 use a 3M3 oscillator resistor
For the EV1527 a 220K, 270K or 390K oscillator resistor can be used.

17. Receive and Transmit RAW data

The Pro firmware can receive and transmit RAW data. This can be used to replay received data received from a remote. Note that this can only be used for a protocol with fixed code and rolling code cannot be used.

It is unknown if and how this is implemented in Home Automation applications!

Here an example of a packet received from an ARC remote in RFXmngr:

```
RAW Packet:
687F000001010804720132046701340467041401BB01300474013104680131046E0131046D0131047001330470012D046B0
133046C013004720132046E013104690132046A0133046D0138046C0130046A041401B901310471041701B70133046A0133
046F012E0000
Packettype      = RAW Packet
Packet Length  = 104
subtype         = RAW packet
Sequence nbr   = 0
Repeat         = 1
Nbr of pulses  = 25
264  1138  306  1127  308  1127  1044  443  304  1140  305  1128  305  1134  305  1133  305  1136
307  1136  301  1131  307  1132  304  1138  306  1134  305  1129  306  1130  307  1133  312  1132
304  1130  1044  441  305  1137  1047  439  307  1130  307  1135  302  0
```

The last value of zero indicates a gap timeout and the real gap is greater than 8000. To replay this packet replace the last zero with a value greater than 8000.

To replay this in RFXmngr, create a text file with the content below and send it on the RAW transmit tab.

The first value is 0 which indicates it is a single packet

The next value (7 in this example) is the repeat count.

Do not set the repeat count too high to lower the risk to disturb other RF transmissions.

```
0
7
264
1138
306
1127
308
1127
1044
443
304
1140
305
1128
305
1134
305
1133
305
1136
```

the next values

```
307
1135
302
10000
```

If you receive multiple RAW packet with more than 62 pulses, try to find the gap. This is normally a higher value and smaller than 8000. Here an example with a gap value of 6600 and the next 6596.

RAW Packet:

```
FC7F000000001190491012C0491012A0492012A0490012A049201270493012801B7040601BC03FF01B903FF048F012C04930
1270493012801B9040001BB03FF01BC040101BB03FF01BB040019C8013C049301280491012A049201290492012704940127
0494012701BE040201BA03FF01BD03FE0492012A049201290492012901BB03FF01BC03FF01BB040401BB03FF01BD040019C
401400490012B048F012D048F012A04950127049301270494012701BC040201BD03FF01BA03FF0493012804920128049501

18. RFXtrx433XL/RFX433 - P1 smart meter connection

The RFXtrx433XL can be connected to the Dutch P1 smart meter with the DSMR P1 option board with RJ11 cable or DIY connection. The RFX433 can be connected using a RJ25

The connection can be tested in RFXmngnr.

Select the correct parameters and click Set Async port.

Important: the P1 connection must be present!

Chime	Fan	Curtain	Blinds1	RFY	Security1	Camera	Remote	Tstat1	Tstat2	Tstat3	Tstat4	Radiator1	Security2	Async
-------	-----	---------	---------	-----	-----------	--------	--------	--------	--------	--------	--------	-----------	-----------	-------

Command	Receive P1	Transmit Async Port command
Baudrate	115200	
Bits	8	
Parity	No	
Stopbits	1	
Polarity	Inverted	

Select the correct parameters for your smart meter:

Meter Brand	DSMR version	ID	Baudrate	Bits	Parity
Iskra ME382, MT382	2.2	/ISK5	9600	7	E
Iskra AM550	5.0	/ISK5	115200	8	N
Kaifa E0003,E0025,MA105,MA304	4.0	/KFM5	115200	8	N
Kamstrup 162,351,382	2.2	/KMP5	9600	7	E
Landis+Gyr E350 ZCF100,ZCF110,ZFF100,ZMF100	4.0	/XMX5LG	115200	8	N
Sagemcom XT210	4.0		115200	8	N

The smart meter connector type is RJ12. The Metering System holds a female connector, the customer can plug in a standard RJ12 or RJ11 plug.

RJ12 is a 6P6C (6 positions, 6 contacts)

RJ11 is a 6P4C (6 positions, 4 contacts) This one can be used to connect the RFXtrx433XL.

Pin #	Signal name	Description
1	+ 5V power	Power supply (not used by the RFXtrx433XL)
2	RTS	Request to Send
3	GND	Data GND
4	NC	Not connected
5	RxD	Data output to the RFXtrx433XL
6	GND power	Power GND (not used by the RFXtrx433XL)

RJ12 and RJ11 connections:

18.1. *DIY P1 connection for RFXtrx433XL batch 3618 and 4018*

1. Open the enclosure by removing the 4 screws.
2. Connect a 4k7 resistor between 3V3 and RxD.
3. Connect the RJ11 cable to the RFXtrx433XL PCB RFXtrx V5.0:
RJ11-2 to RTS
RJ11-3 to GND
RJ11-4 not used
RJ11-5 to RxD
4. Cut a few plastics from the upper side of the enclosure using a Stanley knife.
5. Cut also at the same position a few plastics from the bottom part.
6. Close the enclosure. First turn the screw left until you hear/feel a soft click, now turn the screw right and fix the screw (not too tight).

18.2. *DIY P1 connection for RFXtrx433XL batch 4918 and later*

1. Open the enclosure by removing the 4 screws.
2. Connect a 3k3 resistor between 3V3 and RxD
3. Connect the RJ11 cable to the RFXtrx433XL PCB RFXtrx V5.1:
RJ11-2 to RTS
RJ11-3 to GND
RJ11-4 not used
RJ11-5 to RxD
4. Cut a few plastics from the upper side of the enclosure using a Stanley knife.
5. Cut also at the same position a few plastics from the bottom part.
6. Close the enclosure. First turn the screw left until you hear/feel a soft click, now turn the screw right and fix the screw (not too tight)

18.3. P1 option PCB Type 1 for RFXtrx433XL batch 3618 and 4018

1. Open the enclosure by removing the 4 screws.
2. Solder the 5 pins of the P1 PCB to the RFXtrx433XL PCB RFXtrx V5.0.
First solder 1 pin and check if the connector is fully on the RFXtrx433XL PCB.
Then solder the remaining 4 pins.
3. Cut a few plastics from the upper side of the enclosure for the cable using a Stanley knife.
4. Cut also at the same position a few plastics from the bottom part.
5. Close the enclosure. First turn the screw counter clockwise until you hear/feel a soft click, now turn the screw clockwise and fix the screw (not too tight).

18.4. P1 option PCB Type 2 for RFXtrx433XL batch 4918 and later

1. Open the enclosure by removing the 4 screws.
2. Press the 5 pins of the P1 PCB into the RFXtrx433XL PCB RFXtrx V5.1.
Use a wrench to push the connector into the PCB until the black parts of the Press-Fit connector is on the RFXtrx PCB.
3. Cut a few plastics from the upper side of the enclosure for the cable using a Stanley knife.
4. Cut also at the same position a few plastics from the bottom part.
5. Close the enclosure. First turn the screw counter clockwise until you hear/feel a soft click, now turn the screw clockwise and fix the screw (not too tight)

18.5. RFXusb-RFX433 - P1 smart meter connection

The RFXusb_RFX433 can be connected to the Dutch P1 smart meter with a RJ11 cable.

Open the enclosure by removing the 4 screws.

If R7 and R9 are not present, solder a 3k3 resistor at R7.

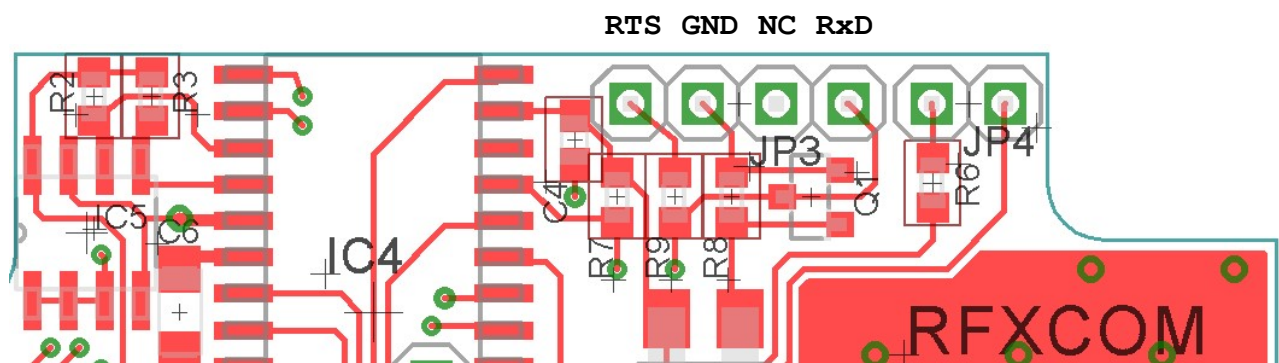

Solder the RJ11 cable to the RFXusb-RFX433:

RJ11-2 to RTS

RJ11-3 to GND

RJ11-4 not used

RJ11-5 to RxD

18.6. RFX433XL - P1 smart meter connection

The RFX433XL can be connected to the Dutch P1 smart meter with a RJ12 cable.

(If PCB is RFX ISS V2 and R7 is not present, solder a 3k3 resistor on this position)

Open the enclosure by removing the 4 screws.

Solder the RJ12 cable to the RFX433XL PCB

RJ12-1 to +5V

RJ12-2 to RTS

RJ12-3 to GND

RJ12-4 not used

RJ12-5 to RxD

RJ12-6 to GND

19. RFXtrx433XL - Teleinfo connection

The RFXtrx433XL can be connected to the French smart meter and needs a Teleinfo interface. At the moment we only supply the Teleinfo interface option only for the RFXtrx version 5.1 (this is on the PCB) which is delivered starting batch 4918 and the later batches xx19 (xx=01 to 52). The batch number is on the label on the backside of the enclosure.

This option cannot be added in the RFXtrx433XL batch 3618 or 4018!!

The connection can be tested in RFXmngnr.

Select the correct parameters and click "Transmit Async Port command".

Important: the Teleinfo connection must be present!

The setting is 1200, 7, Even, 1 and Normal polarity for the "historique" meter

The setting is 9600, 7, Even, 1 and Normal polarity for the new Linky meter

Fan	Hunter	Blinds1	RFY	Security1	Tstat1	Tstat2	Tstat3	Tstat4	Radiator1	Security2	Async
Command	Receive Teleinfo										
Baudrate	9600										
Bits	7										
Parity	Even										
Stopbits	1										
Polarity	Normal										

Transmit Async Port command

19.1. Teleinfo option PCB for RFXtrx433XL batch 4918 and later

1. Open the enclosure by removing the 4 screws.
2. Press the 5 pins of the P1 PCB into the RFXtrx433XL PCB RFXtrx V5.1.
Use a wrench to push the connector into the PCB until the black part of the Press-Fit connector is on the RFXtrx PCB.
3. Cut a few plastics from the upper side (only the raised edge) of the enclosure for the cable, using a Stanley knife.
4. Cut also at the same position a few plastics from the raised edge of the bottom part.
5. Close the enclosure. First turn the screw counterclockwise until you hear/feel a soft click, now turn the screw clockwise and fix the screw (not too tight)

20. RFXtrx433XL - Connection points for a serial interface

This connection can be used for a serial connection with the RFXtrx433XL instead of the USB interface.

The serial interface is using logic level of 5V maximum.

WARNING: Do NOT connect a RS232 interface that operates at +/-12Volts!!

Important: warranty is lost if this modification is used.

- Cut the PCB trace between the connection point R and the FT230X pin 15.
- Connect the serial interface to GND, T and R. Be sure to use a 3V3 or 5V logic level!
- The +5V can be used to power and external interface if required. In this case the RFXtrx433E must be powered by a 5V power supply connected to the USB interface. The +5V can also be an input for powering the RFXtrx433XL. Do not exceed +5V or the RFXtrx433XL will be destroyed.
- The serial interface is using 38400,N,8,1
- Be sure not to use a serial device that produces RF noise at 433MHz. A bad example of such a device is the USR-TCP232 LAN device.

21. Recover from interrupted or wrong flash.

The RFXtrx can become in a loop after an interrupted flash or if you have flashed a wrong firmware. In this case the red LED stays on and no communication is possible.

1. Disconnect the USB,
2. Make a temporary connection (no soldering required) on the backside of the PCB as indicated below by the yellow connection,
3. Connect the USB,
4. Disconnect the temporary connection,
5. Start RFXflash and update the firmware.

OR

22. FAQ

22.1. Receive has stopped suddenly but transmit works.

Most probably a sensor is transmitting constantly. This could be for example an X10 MS13 motion sensor or weather sensor with almost empty battery. Or an outside weather sensor filled with water. Or a remote with a button pressed.

Test the RFXtrx with a remote or sensor on another location (> 1km away) using RFXmngr on a Windows system or laptop.

22.2. Can I increase the receive/transmit range of the RFXtrx?

First check chapter 2.5 for the best place for the RFXtrx antenna.

The switch board is not the best place for the RFXtrx because of all metal objects that will absorb or reflect the RF signals.

It is also advised to place the RFXtrx far away from PC's, routers, Raspberry PI ... because of the RF noise those products produce, and this will reduce the receive range very much.

You can connect another 50ohm 70cm/433MHz antenna with more gain.

For example, <http://www.ebay.com/itm/290979680030>

Install this antenna on a metal plate of at least 30 cm for optimum result.

22.3. The RFXtrx USB connection disconnects sometimes.

This happens mostly on Raspberry PI with a low-quality power supply. Solution is to use a powered USB hub with a good quality power supply.

It can also happen if the USB cable is running along a power cable or a power device is switched on that produces a high-power spike like a fluorescent tube. Solution is to separate the USB cable from all other cables and/or use a powered USB hub with a good quality power supply.

22.4. I have a 433.92MHz sensor/remote but this device is not received.

Besides the frequency the used protocol and modulation type is also important.

See chapter 2 for the list of supported devices.

22.5. The wall plug is switched by the remote, the remote is received but the RFXtrx does not switch the module.

The remote transmits several protocols. The protocol used by the wall plug is not received by the RFXtrx but some other protocols are received.

Solution:

For the HomeEasy EU- HE8xx series: reset the module to remove all paired remotes and pair the module with the RFXtrx433E and one of remote codes that is received.

For IT modules FA500/PROmax: Pair the RFXtrx433E with the module using an IT device and select a random ID. The received remote code can be used to know if the module is switched by the remote.

23. EC Declaration of Conformity

EC Declaration of Conformity

RFXCOM declares that the product:

RFX433

Brand: RFXCOM Type: RFXtrxUSB-RFX433, RFXusb-RFX433, RFX433XL

conforms with the essential requirements and other relevant provisions of the following directives and complies with the following standards applied:

RED 2014/53/EU

EN 300 220-1

EN 300 220-2

EMC Directive 2004/108/EC

EN 301 489-1

EN 301 489-3

LVD 2014/30/EU

EN 62368-1

EN 62311

RoHS 2011/65/EU

EN 63000

24. Warning:

- RF signals are possible disturbed, and it has not been justified for this equipment at uses in circumstances where life-threatening or dangerous situations are possible.
- RFXCOM HARDWARE AND SOFTWARE IS NOT INTENDED FOR USE IN THE OPERATION OF NUCLEAR FACILITIES, AIRCRAFT NAVIGATION OR COMMUNICATION SYSTEMS, AIR TRAFFIC CONTROL SYSTEMS, LIFE SUPPORT MACHINES OR OTHER EQUIPMENT IN WHICH THE FAILURE OF THE SOFTWARE COULD LEAD TO DEATH, PERSONAL INJURY, OR SEVERE PHYSICAL OR ENVIRONMENTAL DAMAGE.

25. License

- You are allowed to use RFXCOM software, protocols and Written Materials with RFXCOM hardware only.
- All copyright and other proprietary notices associated with RFXCOM software, protocols and Written Materials shall be visible to all users.
- You may not sell, distribute, loan, rent, lease, license, sublicense or otherwise assign or transfer RFXCOM software or RFXtrx protocols or Written Materials unless expressly authorized in writing by RFXCOM.
- You may not use any RFXCOM device, software or protocol as part of an exclusive or patented product without the express prior written permission of RFXCOM.
- You may not alter, modify, adapt or create derivative works based on any part of RFXCOM software or protocols or Written Materials in any way, including translating, reverse engineering, disassembling or decompiling the software.

26. Copyright notice

- All RFXCOM hardware, software, protocols and Written Materials are protected by copyright laws, and may not be reproduced, republished, distributed, transmitted, displayed, broadcast or otherwise exploited in any manner without the express prior written permission of RFXCOM.
- Netherlands Copyright and international treaty provisions protect the SOFTWARE, HARDWARE, RFXtrx protocols and Written Materials and shall be subject to the exclusive jurisdiction of the Netherlands Courts
- RFXCOM reserves all rights not expressly granted herein.

27. Revision history

Version 0.0 – August 18, 2011

Initial version.

Version 1.0 – October 30, 2011

RFXflash under Mono added.

Version 2.0 – December 30, 2011

Updated for the production version with FTDI USB chip

Version 2.1 – January 18, 2012

Link for ACM to serial port added in Linux instruction.

EC Declaration of Conformity added

Version 2.2 – February 8, 2012

Protocols overview added

Screen dumps updated

Version 2.3 – February 16, 2012

Novatys planned

Version 2.4 – February 25, 2012

General information updated

Version 2.5 – March 1, 2012

Chapter added how to run RFXmngr or RFXflash on Linux.

Version 2.6 – March 14, 2012

Code tables added

Cresta, UPM added

Version 2.7 – March 15, 2012

Flash procedure updated

Version 2.8 – March 31, 2012

Phenix table added

Version 2.9 – March 31, 2012

AB400 and Phenix address extended

Version 2.10 – April 16, 2012

Linux USB - tty configuration updated

Version 2.11 – May 14, 2012

List of supported protocols updated.

Version 2.12 – June 8, 2012

Chapter added how to run RFXmngr or RFXflash on Mac OS

Version 2.13 – July 15, 2012

List of supported protocols updated

Version 2.14 – August 4, 2012

List of enabled protocols influence added

RFXtrx315 added

Version 2.15 – August 18, 2012

Enabled protocols table changed

Version 2.16 – August 26, 2012

Rubicson stektermometer added

ATI Remote Wonder II added

Version 2.17 – August 28, 2012

Table "sensitivity influenced" updated

Version 2.18 – September 18, 2012

Chapter 2.3 updated: BlindsT0 disables all other protocols

Version 2.19 – September 25, 2012

RFXFlash version required changed to 4.0.0.0

Version 2.20 – September 28, 2012

RF range reduction guide added

Version 2.21 – October 18, 2012

BlindsT2 and BlindsT3 added

Version 2.22 – October 24, 2012

Sartano added

Version 2.23 – October 31, 2012

Sensitivity table updated

Version 2.24 – November 7, 2012
Protocol table extended with the protocols to enable for receive

Version 2.25 – November 14, 2012
HE105 switch settings added

Version 2.26 – November 28, 2012
undec on explained

Version 2.27 – December 4, 2012
Use of Lighting4 commands for undec ARC
Brennenstuhl added

Version 2.28 – December 18, 2012
Receiver tab removed from RFXmngn

Version 2.29 – December 27, 2012
Lighting4 receive added

Version 2.30 – January 1, 2013
Raex motor added

Version 3.00 – January 4, 2013
RFXtrx433 Type1/Type2 firmware added

Version 3.01 – February 4, 2013
Supported protocols list updated

Version 4.00 – February 21, 2013
Chapter 8 - Lighting4 screen updated for RFXmngn 11.0.0.0
Known Lighting4 chapter added

Version 4.01 – March 13, 2013
Receive of LaCrosse sometimes influenced by enabled Hideki

Version 4.02 – June 8, 2013
MDREMOTE LED dimmer added
Conrad RSL2 added
Energenie added

Version 4.03 – September 27, 2013
How to find the MDREMOTE ID (chapter 7.6)
WS1200 added
Byron SX Chime added

Version 4.04 – November 15, 2013
Maverick ET-732 added
Alecto SA30 added
Oregon EW109 added
Revolt added

Version 4.05 – December 5, 2013
Blyss command explanation added.
Lighting4 - Mercury added
Lighting5 – dx.com RGB LED controller added

Version 4.06 – December 27, 2013
Chapter 2.2 updated

Version 4.07 – February 10, 2014
Chapter 7.8 added: how to find the dx.com RGB LED strip driver ID

Version 4.08 – March 20, 2014
ARC and Oregon3.0 updated in table 2.4.
Energenie 5-gang 429.950 added

Version 4.09 – April 4, 2014
BlindsT6 - DC106, YOODA, Röhrmotor24 RMF added

Version 4.10 – April 7, 2014
BlindsT7 - Forest added

Version 4.11 – April 28, 2014
RGB LED – clarified AD is LightwaveRF

Version 4.12 – May 21, 2014
Kambrook RF3672 added
RFY protocol added

Somfy programming instructions added
 Supported protocol list RFXtrx433 updated.
 Protocol list by function added
 Version 4.13 – May 31, 2014
 Opus TX300/Imagintronix Soil sensor added
 Version 4.14 – June 18, 2014
 Prega sensor added
 Conrad 34911 Lighting4 coding added
 Version 4.15 – June 25, 2014
 Kambrook, Rubicson, Viking supported in ext firmware
 Number of RFY remotes increased from 16 to 30
 Version 4.16 – June 29, 2014
 RFXmngn cannot be used on Linux
 Version 4.17 – July 3, 2014
 CoCo GDR2 added
 Version 4.18 – July 14, 2014
 Opus TX300 link added
 Version 4.19 – July 25, 2014
 Aoke relay added
 Version 4.20 – August 25, 2014
 Enabling protocols clarified.
 Version 4.21 – September 5, 2014
 Meade sensors added
 Oregon BTHGN129 sensor added
 Version 4.22 – September 18, 2014
 Eurodomest added (NL - Action)
 Byron MP001 added
 WT0122 added
 Procedures added to find the Eurodomest and TRC02 ver2 ID
 Version 4.23 – September 24, 2014
 Proove TSS330 fridge/freezer sensor added
 Version 4.24 – October 9, 2014
 BlindsT0 added in ext firmware
 Alecto WS1700 and compatibles added
 Version 4.25 – December 13, 2014
 Smartwares radiator valve added
 Proove TSS320 sensor added
 Version 4.26 – January 2, 2015
 SelectPlus200689101 White Chime (Action NL) added
 Version 4.27 – January 6, 2015
 SelectPlus200689103 Black Chime (Action NL) added
 Version 4.28 – January 7, 2015
 Proove outdoor sensors 311346 & 311501 added
 Etekcity Wireless Remote Control Outlet Switch (US)
 Version 5.00 – January 10, 2015
 Copyright message updated
 License chapter added
 RFXmngn information updated
 Version 5.01 – February 27, 2015
 Chapter 2.5 Lighting4 receive is reduced with HomeEasy EU enabled.
 Chamberlain tubular motor added
 Sunpery blind motors added
 DEA Systems receivers added
 Envivo ENV-1348 chime added
 Alecto WS4500 added

Version 5.02 – March 18, 2015
1byOne Easy Chime added
BTX blind motors added
Dolat DLM-1 blind motors added
OTIO added

Version 5.03 – March 19, 2015
TFA 30.3160 pool sensor added

Version 5.04 – April 14, 2015
Chapter 4 updated with restrictions on Lighting4
Siemens SF01 LF959RA50/LF259RB50/LF959RB50 extractor hood added
Maplin N78KA added

Version 5.05 – May 2, 2015
Dooya blind motors added
Louvolute one touch motorised blinds added
Alecto WS3500 added

Version 5.06 – May 4, 2015
Current dx.com TRC02 LED drivers have a different protocol and are not supported.

Version 5.07 – June 1, 2015
WH2 temperature humidity sensor added
RGB LED controller <http://www.ebay.com/itm/191481664563> (maybe dx.com 227892)

Version 5.08 – July 31, 2015
Oregon MSR939 added
ESMO blind motors added
Brel blind motors added
Blinds T6 type motors now also supported in Ext firmware
Supported devices table 2.2.2. updated

Version 5.09 – Aug 12, 2015
Luxaflex blind motors added

Version 5.10 – Aug 17, 2015
JVS screen motors added
Livolo NL link added

Version 5.11 – Aug 31, 2015
ASA motors added

Version 5.12– Sept 14, 2015
Home Confort added

Version 5.13– Oct 2, 2015
Oregon GR101 received in Type1 firmware
Conrad RSL sensors received in Type2 firmware

Version 5.14– Oct 7, 2015
Quotidom blinds motor added

Version 5.15– Nov 06, 2015
Banggood temp-hum sensor added
Legrand CAD radio added

Version 5.16– Nov 26, 2015
Proluxx codes corrected

Version 5.17– Dec 24, 2015
RFXflash procedure updated
Rubicson pool sensor 48.019 added
Inovalley SM80 plant sensor added
Lucci Air fan added

Version 5.18– Jan 1, 2016
1byone Drive Way alarm added

Version 5.19– Feb 6, 2016
Avantek added
ASP blinds motors BlindsT11 added
Maverick ET-733 added
Profiles PAC-326R Belcanto chime added
HQ COCO-20 added

Version 5.20– Feb 18, 2016
BlindsT12 Confexx CNF24-2435 added
IT FA500, PROmax... added
Ext2 firmware overview added in chapter 2
Auriol Z31055B-TX added
Chuangou, Eminent security sensors added

Version 5.21– May 6, 2016
Cartelectronic TIC and Encoder added
FAQ chapter added

Version 5.22– May 14, 2016
Corrected: TX95 is using the Rubicson protocol
MDRemote V108 added
